

## TECHNICAL SHEET

**Type**

House

**Author**

Fernanda Marques

**Project Name**

Brick House

**Project Start Date**

2023

**Project Completion Date**

Ongoing

**Location**

Itú, SP, Brazil

## PRESS RELEASE

Brick, wood, and metal. These are the three core materials of our Brick House project. The organically shaped pool stands as a key highlight in the garden's exterior design. The house is surrounded by abundant tropical vegetation, seamlessly integrating nature into its architecture.

Among the natural materials used in the project, exposed brick takes center stage. The spaced arrangement of the bricks allows for varying levels of natural light throughout the day, creating dynamic and atmospheric interiors. At the entrance, a brick wall provides privacy while serving as an elegant backdrop to the surrounding garden, emphasizing its role as the protagonist of Brick House.

Access to the house is through a closed corridor leading up to the entrance hall, which opens into a spacious and unified living area. Large openings invite natural light and ventilation into the home, continuously transforming the space's ambiance throughout the day and enhancing its sense of vitality.

Brick House is a harmonious blend of architectural simplicity and the dynamic interplay of light, space, and nature.
